

R数据可视化—ggplot2包 第5周

2013.2.8

法律声明

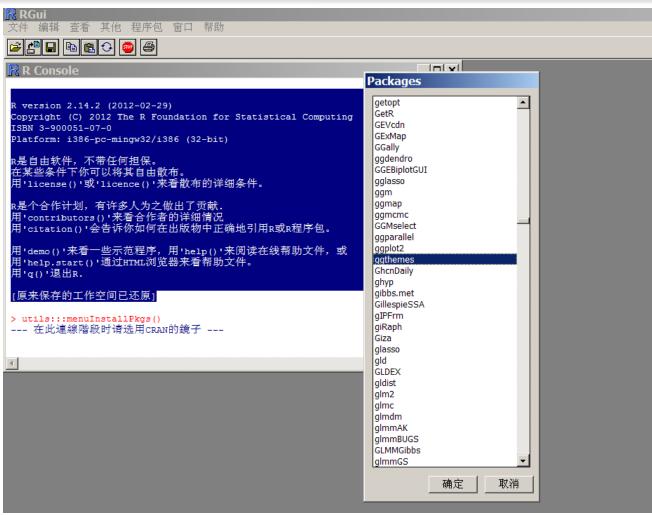

【声明】本视频和幻灯片为炼数成金网络课程的教学资料,所有资料只能在课程内使用,不得在课程以外范围散播,违者将可能被追究法律和经济责任。

课程详情访问炼数成金培训网站

http://edu.dataguru.cn

ggthemes包

2013.2.8

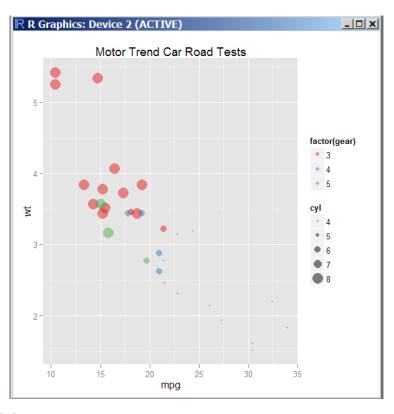

例子

■ 传统ggplot2风格

ggplot(mtcars,aes(x=mpg,y=wt,size=cyl,colour=factor(gear)))+

geom_point(alpha=.5)+ #透明度
scale_size_area()+ #区域和数值成比例
scale_colour_brewer(palette="Set1")+
ggtitle("Motor Trend Car Road Tests")

例子

■ Excel风格

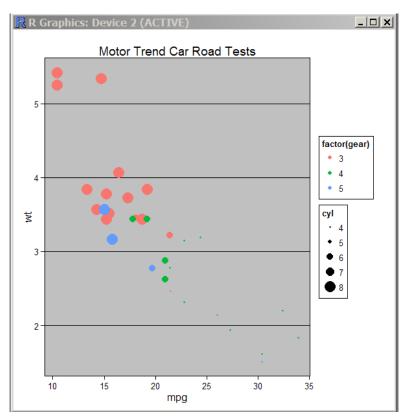

ggplot(mtcars,aes(x=mpg,y=wt,size=cyl,colour=factor(gear)))+

geom_point()+

theme_excel() +

scale_fill_excel()+

ggtitle("Motor Trend Car Road Tests")

2013.2.8

例子

■ Economist风格

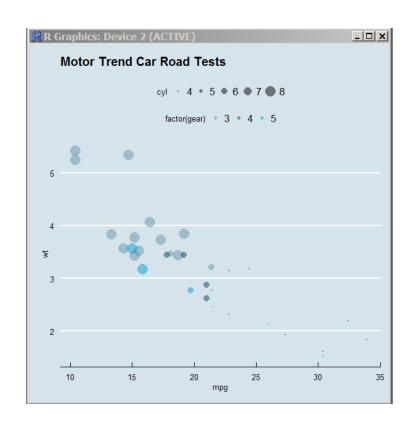

ggplot(mtcars,aes(x=mpg,y=wt,size=cyl,colour=factor(gear)))+

geom_point(alpha=.5)+

theme_economist() +

scale_colour_economist()+

ggtitle("Motor Trend Car Road Tests")

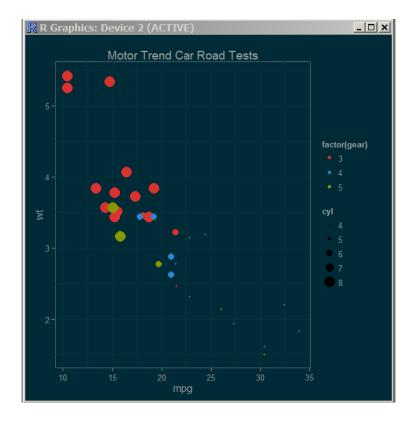

例子

■ 深色风格

ggplot(mtcars,aes(x=mpg,y=wt,size=cyl,colour=factor(gear)))+

geom_point()+
theme_solarized(light=FALSE) +
scale_colour_solarized("red")+
ggtitle("Motor Trend Car Road Tests")

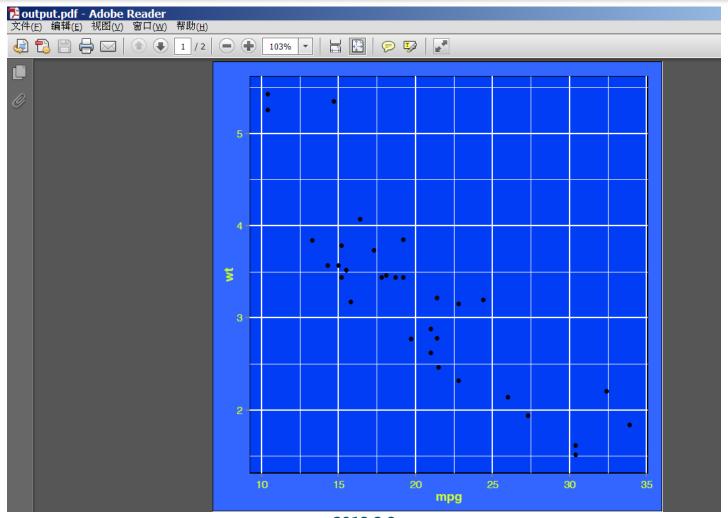

输出到文件ggsave()

```
qplot(mpg, wt, data = mtcars)
ggsave(file = "output.pdf")
pdf(file = "output.pdf", width = 6, height = 6)
# If inside a script, you will need to explicitly print() plots
qplot(mpg, wt, data = mtcars)
qplot(wt, mpg, data = mtcars)
dev.off()
```

结果

2013.2.8

在同一页面上画多幅图

■ 先产生三幅图

```
(a <- qplot(date, unemploy, data = economics, geom = "line"))
(b <- qplot(uempmed, unemploy, data = economics) +
geom_smooth(se = F))
(c <- qplot(uempmed, unemploy, data = economics, geom="path"))</pre>
```

2013.2.8

viewport()

Library(grid)

```
# A viewport that takes up the entire plot device
```

```
vp1 < - viewport(width = 1, height = 1, x = 0.5, y = 0.5)
```

vp1 <- viewport()</pre>

A viewport that takes up half the width and half the height,

located in the middle of the plot.

$$vp2 < - viewport(width = 0.5, height = 0.5, x = 0.5, y = 0.5)$$

$$vp2 < - viewport(width = 0.5, height = 0.5)$$

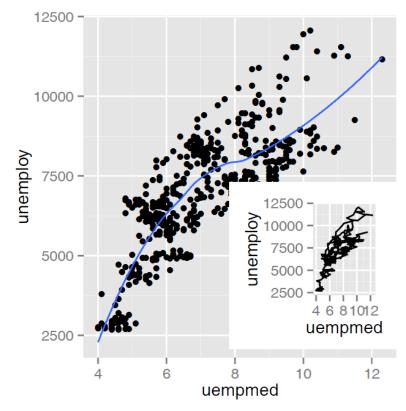

A viewport that is 2cm x 3cm located in the center

实验

```
pdf("polishing-subplot-1.pdf", width = 4, height = 4) subvp <- viewport(width = 0.4, height = 0.4, x = 0.75, y = 0.35)
```

b print(c, vp = subvp) dev.off()

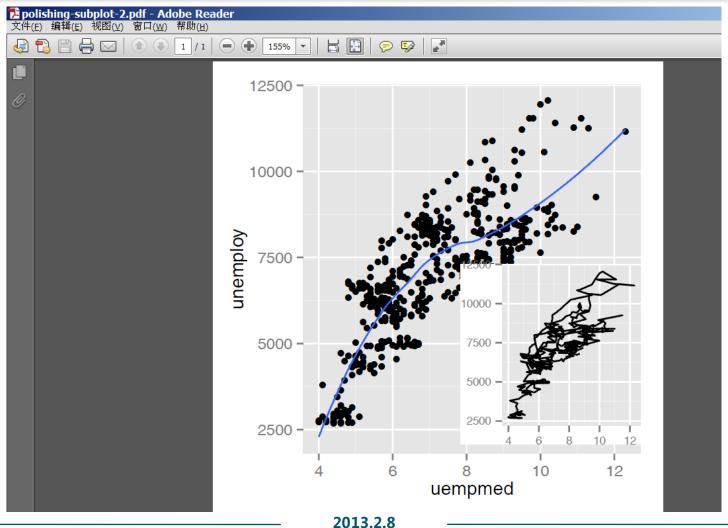

改进

```
csmall <- c +
theme_gray(9) +
labs(x = NULL, y = NULL) +
theme(plot.margin = unit(rep(0, 4), "lines"))
pdf("polishing-subplot-2.pdf", width = 4, height = 4)
b
print(csmall, vp = subvp)
dev.off()</pre>
```

结果

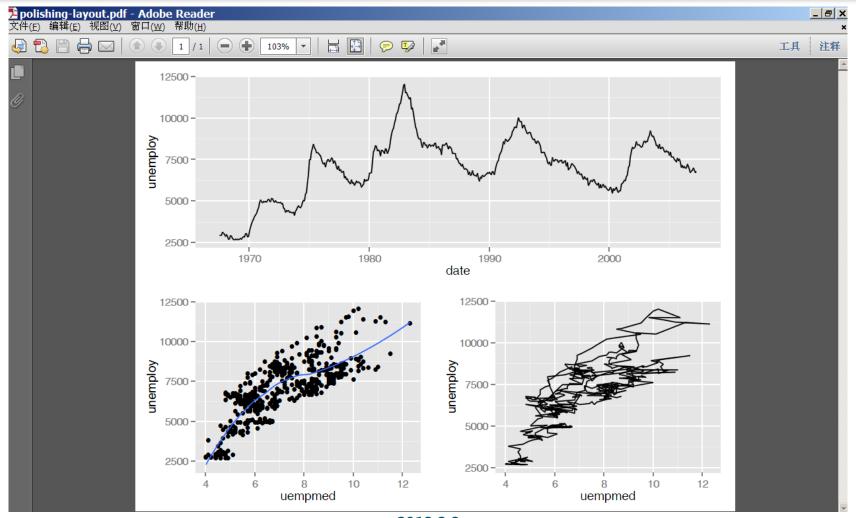

指定比例

```
pdf("polishing-layout.pdf", width = 8, height = 6)
grid.newpage()
pushViewport(viewport(layout = grid.layout(2, 2)))
vplayout <- function(x, y)</pre>
viewport(layout.pos.row = x, layout.pos.col = y)
print(a, vp = vplayout(1, 1:2))
print(b, vp = vplayout(2, 1))
print(c, vp = vplayout(2, 2))
dev.off()
```

结果

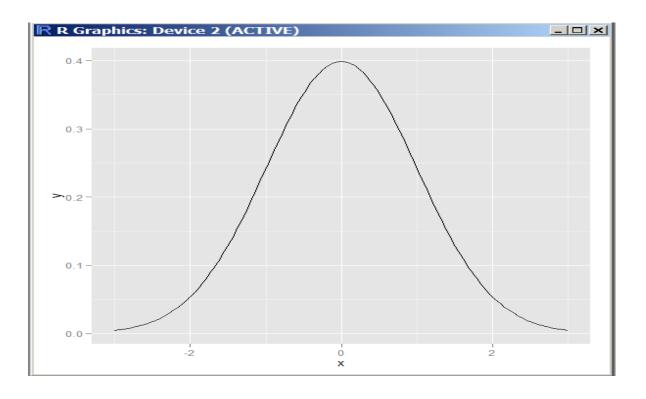

画函数图像

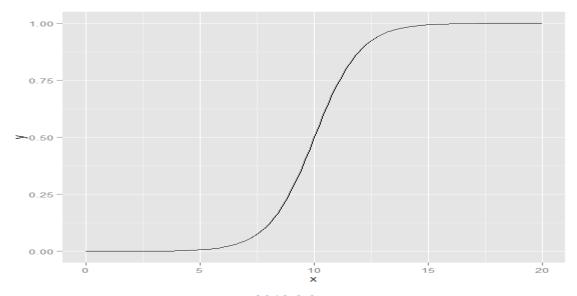

- $p \leftarrow ggplot(data.frame(x=c(-3,3)), aes(x=x))$
- p + stat_function(fun = dnorm)

画函数图像

```
myfun <- function(xvar) \{ \\ 1/(1 + exp(-xvar + 10)) \\ \} \\ ggplot(data.frame(x=c(0, 20)), aes(x=x)) + stat_function(fun=myfun) \\ \}
```

2013.2.8

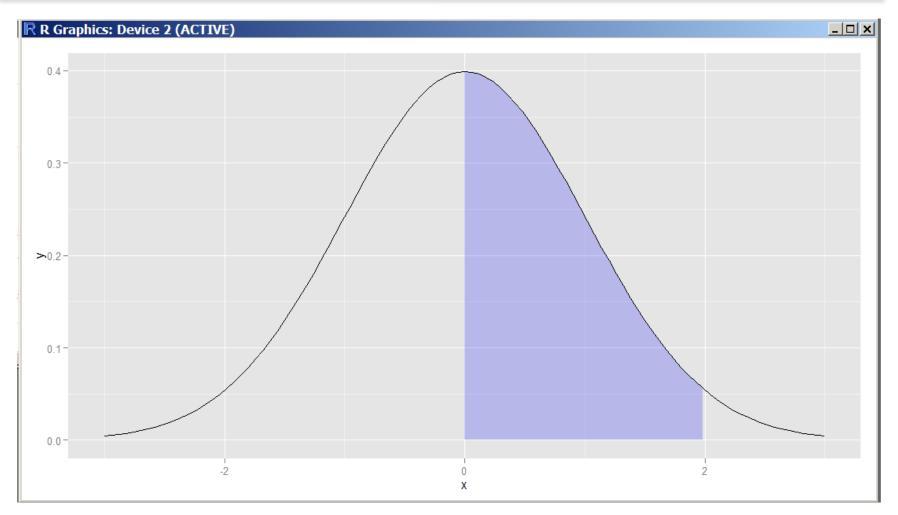

画微积分学中常见的曲边梯形

```
# Return dnorm(x) for 0 < x < 2, and NA for all other x
dnorm limit <- function(x) {
y < -dnorm(x)
y[x < 0 | x > 2] < -NA
return(y)
# ggplot() with dummy data
p < -qqplot(data.frame(x=c(-3, 3)), aes(x=x))
p + stat_function(fun=dnorm_limit, geom="area", fill="blue", alpha=0.2)
   +stat_function(fun=dnorm)
```

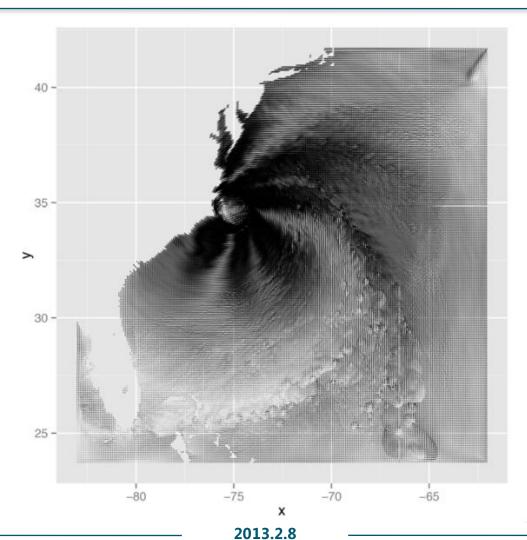

结果

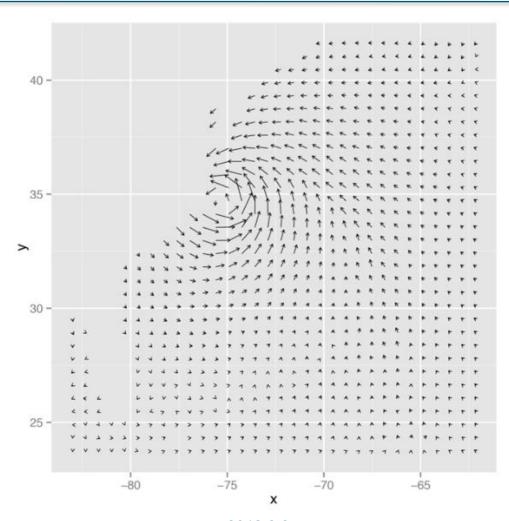

ggplot2画向量场

向量场

2013.2.8

向量场

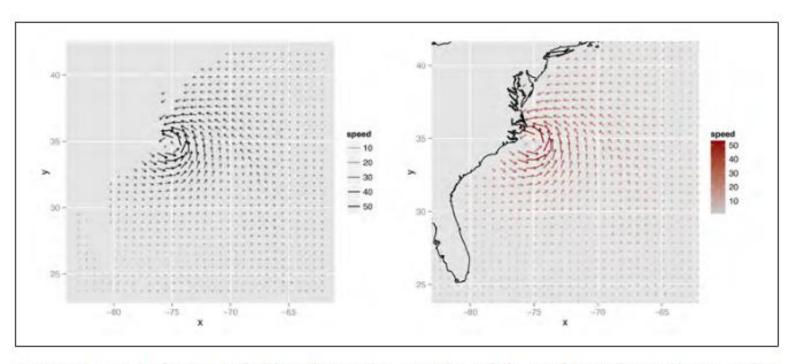

Figure 13-23. Left: vector field with speed mapped to alpha; right: with speed mapped to colour

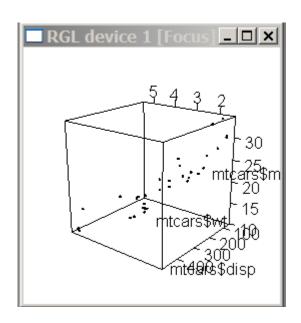

让图形动起来

■ 并非ggplot2包的功能

library(rgl)

plot3d(mtcars\$wt, mtcars\$disp, mtcars\$mpg, type="s", size=0.75, lit=**FALSE)** play3d(spin3d())

在R中实现动态气泡图

- http://cos.name/2013/01/dynamic-bubble-plot-in-r/
- 使用ggplot2包,animation包,ffmpeg软件
- 数据下载: https://github.com/mbostock/bost.ocks.org/blob/gh-pages/mike/nations/nations.json
- 代码下载: http://blog.programet.org/wp-content/uploads/HansRosling.txt

```
#Set index
nameind=which(data=="name")
regind=which(data=="region")
incind=which(data=="income")
popind=which(data=="population")
lifind=which(data=="lifeExpectancy")
endpoint=nameind-1
endpoint=endpoint[2:180]
endpoint[180]=45999
name=data[nameind+1]
region=data[regind+1]
```

```
#An empty data.frame type
 initdfr=data.frame(name=rep(0,210), region=rep(0,210), year=1800:2009, income=rep(0,210), pop=rep(0,210), life=rep(0,210), 
 #An string split function only working for the comma
 splt=function(x) return(as.numeric(unlist(strsplit(x,","))))
#Linear interpolation function, for those zero data
itpl=function(a)
                                                   ind=which(a>0)
                                                     if (ind[1]>1)
                                                                                                                                              a[1:(ind[1]-1)]=rep(a[ind[1]],ind[1]-1)
                                                     n=length(ind)

炼数成金逆向收费式网络课程

- Dataguru (炼数成金)是专业数据分析网站,提供教育,媒体,内容,社区,出版,数据分析业务等服务。我们的课程采用新兴的互联网教育形式,独创地发展了逆向收费式网络培训课程模式。既继承传统教育重学习氛围,重竞争压力的特点,同时又发挥互联网的威力打破时空限制,把天南地北志同道合的朋友组织在一起交流学习,使到原先孤立的学习个体组合成有组织的探索力量。并且把原先动辄成干上万的学习成本,直线下降至百元范围,造福大众。我们的目标是:低成本传播高价值知识,构架中国第一的网上知识流转阵地。
- 关于逆向收费式网络的详情,请看我们的培训网站 http://edu.dataguru.cn
